AI TOOLS DISCOVERY

Exploring 5 AI Tools Across Everyday Categories

Task 1 | InAmigos Foundation

Name: Madapa Mithra

Objective: To explore five different AI tools from varied categories and understand their purpose and practical use in daily life, studies, work, and creative tasks.

Overleaf AI | *Academic Writing / Research*

Definition

Overleaf is a cloud-based LaTeX platform for writing and publishing scientific and technical documents, letting several people edit the same project together in real time through a browser, with no software to install.

Characteristics

- Fully online, nothing to download or set up
- Built for real-time, multi-author collaboration
- Focused on scientific and technical writing in LaTeX

AI Definition

Overleaf AI is the platform's built-in assistant for research writing. It offers a chat panel for project questions, explains and fixes LaTeX compilation errors, and includes tools tuned for academic tone and formatting.

Practical Uses

Explains a confusing LaTeX error and suggests the exact fix.
Turns a plain-text description into a formatted equation or table.
Rewrites a paragraph to sound more concise and scientific.
Summarises a section or drafts a title/abstract via the chat panel.[1]

Grammarly AI | *Writing & Proofreading*

Definition

Grammarly is a writing-assistant tool that reviews spelling, grammar, and tone, and flags possible plagiarism in a piece of writing.

Characteristics

- Started as a proofreading and grammar-check tool
- Now combines NLP with generative AI for fuller writing support
- Works across browsers, documents, and email

AI Definition

Grammarly AI extends the original grammar checker into a generative writing assistant can brainstorm ideas, draft content from a prompt, rewrite full sentences, and adjust tone while checking originality.

Practical Uses

Drafts a quick outline or email reply from a short prompt.
Fixes spelling, grammar, and punctuation while improving flow.
Shifts a casual message into a formal, workplace-ready tone.
Checks a draft for accidental plagiarism before submission.[2]

Google Meet AI (Gemini) | *Communication / Video Conferencing*

Definition

Google Meet is a secure, free online video-calling tool from Google that lets people talk, see each other, and share their screen through a browser or mobile app, with group calls supporting up to 100 participants.

Characteristics

- Video and audio calls with screen sharing
- Live text chat alongside the call
- Background blur and live captions built in

AI Definition

Google Meet uses Gemini AI to enhance calls it can auto-generate meeting notes, provide live translated captions, cancel background noise, and improve audio and lighting quality, on eligible Workspace or Google AI plans.

Practical Uses

'Take notes with me' saves a summary and action items straight to a Google Doc.
Live captions translate speech in real time for multilingual participants.
'Summary so far' helps a late joiner catch up without interrupting the speaker.[3]

Notion AI | *Productivity / Organisation*

Definition

Notion is an all-in-one digital workspace that combines note-taking, task management, and databases into a single flexible platform built from movable, modular blocks.

Characteristics

- Pages built from flexible text, image, list, and toggle blocks
- Databases that convert into Kanban boards, calendars, or lists
- Real-time sharing, commenting, and task assignment

AI Definition

Notion AI is the workspace's built-in assistant used in writing and editing text, summarises long notes, answers questions about workspace content, and can run multi-step agents across pages and connected apps.

Practical Uses

Condenses long, messy lecture notes into a short summary before an exam.
Builds a habit tracker, journal, or travel planner from a simple prompt.
Maintains a company wiki, roadmap, or client database for a team project.[4]

Claude

Claude | *AI Assistant / Education & Coding*

Definition

Claude is an advanced AI assistant created by Anthropic that handles text chat, coding, document analysis, and web search, built using Anthropic's Constitutional AI approach to safety and available in tiers such as Haiku, Sonnet, and Opus.

Characteristics

- Writes in a natural, human-like style for emails, essays, and stories
- Handles large documents thanks to its long context window
- Generates and runs code, including interactive artifacts

AI Definition

As an AI assistant in its own right, Claude's core capability is combining natural conversation with practical tasks such as reading and reasoning over long documents, writing content, and producing or debugging working code.

Practical Uses

Explains a difficult data-structures concept in simple terms.
Generates practice coding questions to prepare for a technical interview.
Reads a long document and pulls out a clear summary.[5]
