THE RISE PROMPT MASTER

NGO Use Case: Panchayat Proposal for a Rural Infrastructure Project

Task 2 | InAmigos Foundation

Name: Madapa Mithra

Objective: To design a structured RISE prompt for an NGO

- A formal proposal to a local Gram Panchayat for a rural infrastructure repair project.
- Compare its output against a basic, unstructured prompt.

1. Problem

NGO challenge: An NGO that works in rural community development needs to draft a formal proposal to the local Gram Panchayat, asking for approval and collaborative support to repair damaged internal village roads and drainage channels. Basic AI prompt tends to produce vague informal request that lacks the structure, respectful tone, and specificity required for effective communication with a local government body.

2. Basic Prompt & Generic AI Output

Basic Prompt:

> Write a proposal to the panchayat asking for help to fix roads in a village.

Generic AI Output:

> **Subject: Request for Road Repair**
>
> Dear Sir/Madam,
>
> We would like to request the Panchayat to repair the roads in our village, as they are in poor condition and causing difficulties for the villagers. We hope you will consider our request and take necessary action soon.
>
> Thank you.
>
> Regards,
> NGO Team

3. RISE Master Prompt

R – Role

Act as an NGO community development coordinator experienced in drafting formal proposals to Gram Panchayats for rural infrastructure projects.

I – Input

The NGO works with a rural community whose internal roads and drainage channels have deteriorated, causing waterlogging, restricted access to the school and health centre, and safety hazards during monsoon. The audience is the Sarpanch and Panchayat members. The purpose is to seek formal approval and collaborative support such as labour coordination, partial resources, or permissions for a community-led repair initiative. Avoid blaming officials, exaggerated claims along with that keep a respectful and cooperative tone.

S – Steps

1. State the current infrastructure problem and its observed impact on residents.

2. Describe the proposed repair work.
3. Explain the NGO's and community's planned contribution (labour, coordination, monitoring).
4. Specify the support requested from the Panchayat.
5. Close respectfully with contact details for follow-up. Review the draft for formal tone, clarity, and respectfulness.

E – Expectation

Write a 200–250 words formal proposal letter with a clear subject line, formal greeting, structured body paragraphs, and a professional closing block. Do not include fabricated statistics, dramatic language, or unverifiable claims.

RISE Prompt used:

> Act as an NGO community development coordinator experienced in drafting formal proposals to Gram Panchayats for rural infrastructure projects. The NGO works with a rural community whose internal roads and drainage channels have deteriorated, causing waterlogging, restricted access to the school and health centre, and safety hazards during monsoon. The audience is the Sarpanch and Panchayat members, and the purpose is to seek formal approval and collaborative support such as labour coordination, partial resources, or permissions for a community-led repair initiative. Avoid blaming officials or making exaggerated claims, and maintain a respectful, cooperative, and professional tone. In the proposal, first state the current infrastructure problem and its observed impact on residents, then describe the proposed repair work, explain the NGO's and community's planned contributions such as labour, coordination, and monitoring, specify the support requested from the Panchayat, and close respectfully with contact details for follow-up. Before finalizing, review the proposal for formal tone, clarity, accuracy, and respectfulness. Write a 200–250 word formal proposal letter with a clear subject line, formal greeting, structured body paragraphs, and a professional closing block. Do not include fabricated statistics, dramatic language, or unverifiable claims.

4. Results: Improved AI Output

RISE AI Output:

Subject: Proposal for Community-Led Repair of Internal Roads and Drainage Channels
Respected Sarpanch and Members of the Gram Panchayat,

On behalf of [NGO Name], we would like to bring to your kind attention the deteriorated condition of the internal roads and drainage channels in our community. During the monsoon, accumulated water and blocked drainage create difficulties for residents and can restrict safe access to important facilities such as the local school and health centre.

To address these concerns, we propose a community-led repair initiative involving the cleaning and restoration of drainage channels, removal of blockages, filling of damaged road sections, and other necessary minor repairs identified through a joint assessment. The initiative will be carried out in coordination with community members and relevant Panchayat representatives.

The NGO and local residents are prepared to contribute through voluntary labour, community mobilisation, coordination of activities, and regular monitoring of the repair work. We respectfully request the Gram Panchayat's support in providing necessary permissions, coordinating available labour or technical assistance, and extending partial resources or materials where feasible.

We believe that collaboration between the Panchayat, NGO, and community can help improve local access and drainage conditions in a practical and sustainable manner. We would be grateful for an opportunity to discuss the proposal and plan the work together.

Yours faithfully,
[Name]
[Designation]
[NGO Name]
[Contact Number]
[Email Address]

5. Before & After Comparison

Aspect	Basic Prompt Output	RISE Prompt Output
Specificity	Vague request with no context about the problem.	Defines the NGO's role, the infrastructure issue, audience, and communication boundaries.
Tone	Informal and slightly demanding.	Respectful, formal, and cooperative.
Structure	Greeting, complaint, closing.	Problem → proposed action → NGO's contribution → request → shared benefit → closing.
Credibility	General complaint with no plan.	Presents a collaborative plan without invented statistics or claims.
Call to action	Please take action soon.	Specifies exactly what support is requested such as guidance, materials, permission.
Control over output	Little control over length, tone, incompleteness or format.	Sets word count, tone, format, audience, steps, and constraints.

Structured prompting reduces ambiguity, especially for formal communications like a government proposal. The basic prompt only tells the AI what to produce, so the response stays simple and informal making it unsuitable for an official reader like a Panchayat body. The RISE framework adds four layers of direction. As a result, the AI output becomes structured, respectful, and genuinely usable for real engagement with local government.

Prompt engineering is not just about asking AI a better question it is about giving the model enough context and direction to produce an output that fits a real-world objective.
